Service Program (Version 1.0) for Stylus Pro 7500P
Operating Instructions

Compared with MS-DOS program, the User Interface of this Windows program has quite changed. But the procedure of adjustment is the same as MS-DOS program.

1.   Operating Environment:
- Windows 95 OSR2.0 or higher and Windows98.

- As printer port;
  Parallel port is LPT1 - LPT3 (Windows95, 98)

2.   Setup procedures:
The following procedures are required to execute this program.
Double-click Setup.exe, and the program will be automatically installed.
This enables you to perform the Service Program from the "Start Menu".
Correct program is automatically installed according to your OS; Windows 95 or
  Windows 98.

3.   Cautions:
1)   Please make any adjustments or settings using a parallel cable.

2)   When you operate this program on the Windows 95 or Windows 98, you cannot
      operate it with Status Monitor is running. Close Status Monitor on Task tray before
      start the Service Program.

3)   Do not change the setting for "Font size" in "settings tab" of the "Display Property"
      window.

4)   Please do not start the Service Program before connecting the printer with a parallel
      I/F cable.
      If you do not follow the instruction, the program will freeze.

5)   In case the power's turned off, or the parallel I/F cable is removed during the
      Service Program, please restart the Service Program.
